The talk reviews some old problems in Elementary Number Theory which go back to FAREY, GAÜß, Riemann and MINKOWSKI. These involve the FAREY- and the GAÜß-map, the RIEMANN Hypothesis and the slippery devil’s staircase of MINKOWSKI. We will discuss some important old answers as well as some surprising new results. The talk should be accessible to non-experts in this area.

**Abstract:**

The talk reviews some old problems in Elementary Number Theory which go back to FAREY, GAÜß, Riemann and MINKOWSKI. These involve the FAREY- and the GAÜß-map, the RIEMANN Hypothesis and the slippery devil’s staircase of MINKOWSKI. We will discuss some important old answers as well as some surprising new results. The talk should be accessible to non-experts in this area.
