

Übungsblatt 13

Präsenzübungen

P54. In einer Telefonzentrale laufen während der Hauptgeschäftszeiten im Mittel 120 Anrufe pro Stunde auf. Angenommen die Anzahl der Anrufe X ist Poissonverteilt. Wie ist die Wahrscheinlichkeit, dass innerhalb einer Minute

- a) kein Anruf
- b) ein Anruf
- c) höchstens drei Anrufe
- d) mehr als drei Anrufe

eintreffen?

P55. Sei X eine $B(5; 0, 2)$ -verteilte Zufallsvariable.

- a) Berechnen Sie den Erwartungswert $E(X)$, sowie die Varianz und Standardabweichung.
- b) Bestimmen Sie die Normal-Approximation von X und vergleichen Sie deren Erwartungswert, Varianz und Standardabweichung mit Ihren Ergebnissen aus a).

P56. Bei der Messung eines statistischen Merkmals erhält man die folgenden Daten:

1, 1, 2, 2, 3, 3, 3, 3, 4, 4, 7.

Bestimmen Sie die empirische Standardabweichung dieser Stichprobe.

P57. Bestimmen Sie den Median und die 25%- und 75%-Quantile der Stichprobe

1, 3, 1, 2, 5, 2, 4, 2, 4, 3, 5, 1.

Tabelle der Werte der Standardnormalverteilung $\Phi(x)$ für $0.00 \leq x \leq 4.59$.
